Breeds of Cattle

Updated & Revised 2nd Edition

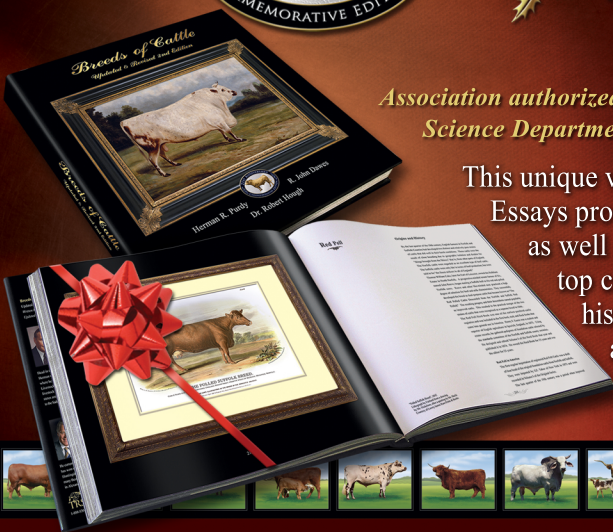

Written by Herman R. Purdy, R. John Dawes and Dr. Robert Hough

Revisions by Don Hutzel, Foreword by John M. Meyer

Association authorized and endorsed by U.S. Departments of Agriculture, Agriculture & Animal Science Departments of Major Universities and top cattle producers across the country.

This unique volume contains histories of 45 major breeds of beef and dairy cattle. Essays provide historic information on the origin and phenotype of each breed, as well as current statistics compiled from the breed registries of the nation's top cattle breeders' associations. The resulting work serves as an in-depth history of cattle breeding, a practical handbook for today's active breeder, an entertaining story of an important industry, and a stunningly designed art book. No other book presents the world of cattle breeding in such an encompassing and engrossing way.
